EXPLANATORY NOTES

CAAT class and type rating and licence endorsement list — flight crew

1. General

Two separate CAAT class/type rating and licence endorsement lists — flight crew are published by CAAT, one for helicopters and one for aeroplanes. These lists constitute the class and type of aircraft categorisations in accordance with FCL.010 (category of aircraft, class of aeroplane, and type of aircraft) and FCL.700 of TCAR PEL (Part-FCL) as well is accordance with GM1 FCL.700.

The lists indicate if Operational Suitability Data (OSD) flight crew are available. CAAT type certificate data sheets (TCDSs) and the list of CAAT supplemental type certificates contain further references to OSD. Complete current OSD information is held by the relevant type certificate (TC) or STC holder.

Furthermore, the lists provide aircraft-specific references relevant to flight crew qualifications and air operations.

FCL.010 'Definitions' defines types of aircraft as follows:

'type of aircraft' means a categorisation of aircraft requiring a type rating as determined in the operational suitability data established in accordance with Annex I (Part-21) to Regulation (EU) No 748/2012 (OSD), and which includes all aircraft of the same basic design including all modifications thereto except those which result in a change in handling or flight characteristics.

FCL.700 describes the circumstances in which a class or type rating is required and GM1 FCL.700 describes tables for the classification of class rating aircraft.

2. Aircraft class ratings

Aircraft class rating designations are incorporated within the lists.

Aircraft within a class rating are not individually listed, except for aircraft with specific provisions.

3. CAAT type rating and licence endorsement lists

These lists provide users with a consolidated overview of established type rating designations and associated licence endorsements. The type rating and licence endorsement lists do not include information for all aircraft. In particular, aircraft may not be included if they are part of a class rating single-engine piston (SEP) (land/sea), class rating single-engine turbine (SET) (land/sea and amphibious), multi-engine piston (MEP) (land/sea), touring motor glider (TMG), or not subject to an OSD evaluation in accordance with Part-21.

Furthermore, the lists indicate whether aircraft are defined as complex aircraft in accordance with the Basic Regulation and if they are classified as (single-pilot) high-performance aircraft (HPA) in accordance with Part-FCL.

Finally, the lists indicate whether aircraft have been classified as variants. Flight crew type rating and variant designations are established by CAAT through the OSD flight crew evaluation process and are only valid for the evaluated aircraft make and model.

③ **Licence endorsement**

The licence endorsement is established in accordance with FCL.010 (category of aircraft, class of aeroplane, and type of aircraft) and FCL.700 of TCAR PEL (Part-FCL), as well is accordance with GM1 FCL.700.

Occasionally, the addition of a new aircraft variant may lead to a change in an existing licence endorsement. In these cases, the previous licence endorsement remains valid but should be replaced with the amended endorsement during the next routine licence renewal.

④ **Aircraft variants**

1. Aircraft within class ratings

Aircraft within class ratings do not have associated OSD in accordance with Part-21. The 'CAAT class/type rating and licence endorsement lists — flight crew' provide categories of class ratings — such as SEP, MEP, SET, etc.— and indicate aircraft which are considered as variants.

Aircraft within the same class rating which are separated by a horizontal line in the tables require differences training, whereas those aircraft which are contained in the same cell require familiarisation when transitioning from one aircraft to another[1]. As an example, a SEP (land) aeroplane with variable pitch propeller and a SEP (land) aeroplane with retractable undercarriage require differences training, whereas two different SEP (land) aeroplanes, both with cabin pressurisation require familiarisation.

All aircraft within the same class rating MEP or SET always require differences training, unless indicated otherwise in the list.

[1] Refer to GM1 FCL.135.A; FCL.135.H DIFFERENCES AND FAMILIARISATION TRAINING:

(a) Differences training requires the acquisition of additional knowledge and training on an appropriate training device or the aircraft.

(b) Familiarisation requires the acquisition of additional knowledge.

All manufacturers	Single-engine turbo-prop engines	SET	X	—	SP	—	Class rating SET Aircraft within the class rating SET (land) are not listed individually in this table unless specific provisions have been established. All aircraft within the same class rating SET require differences training, unless indicated otherwise in the list

All aircraft within the same class rating MEP require differences training, unless indicated otherwise in the list.

2. Aircraft with type ratings

Where more than one aircraft model/name are listed in column ② under the same licence endorsement, these aircraft are designated as variants of the same type of aircraft. This is indicated by 'X' in column ④.

Aircraft models/names of variants which are separated by a horizontal line require differences training (for example, B737-500 series and B737-600 series), whereas those variants which are contained in the same cell only require familiarisation (for example, B737-300 series and B737-400 series), when transitioning from one variant to another.

Normally, the variant designation is the result of an operational evaluation referenced in column ⑦ and ⑧. The referenced document(s) may contain specific details regarding pilot training, checking and currency, as well as prerequisites, credits, or limitations, and must be consulted. Transitioning between variants may not have been evaluated between all models or in all directions.

OSD flight crew documents are held by the relevant (S)TC holder and available in accordance with Part-21, 21.A.62. A list of OSD TC-STC holder contacts is published on the CAAT website.

Where variant determinations are established without an operational evaluation, operators, ATOs or competent authorities should assess the differences, as applicable.

⑤ **Complex**

The mark 'X' in column ⑤indicates that an aircraft is categorised as complex motor-powered aircraft in accordance with the definition in the Basic Regulation.

⑥ **Single-pilot (SP)/SP HPA/Multi-pilot (MP)**

Column ⑥ indicates if an aircraft is certified for a minimum of one pilot (SP), classified as high- performance aeroplane (SP HPA) in accordance with Part-FCL requirements, or certified for a minimum of two pilots (MP).

Note: Aircraft which are certified for SP may be operated in a multi-crew environment for a variety of reasons. Applicable requirements relevant to flight crew qualifications and air operations apply; OSD for flight crew may contain additional provisions, where available.

⑦ **OSD FC**

The mark ‘X’ in column ⑦ indicates the availability of an Operational Suitability Data Flight Crew (OSD FC) document.

OSD FC documents are established in accordance with the Part-21 aircraft type certification provisions, are held by the (S)TC holder and made available in accordance with Part-21, para. 21.A.62.

Where no OSD FC documents exist– Flight Crew may be established by the Agency to assist CAAT, operators, training organisations, instructors and any other personnel involved in flight crew training and air operations. OSD Contact list are published on the EASA website at https://www.easa.europa.eu/document-library/operational-suitability-data

⑧ **Remarks**

Relevant information in relation training and differential training are indicated in this column
